

Grace

- Mentioned to write the full name for these variables IV, FPS-R score and ASA
- Do not understand the difference between resident and anesthetist
- Do not have an equation for model

Runhe

- Mentioned the group do not need the first model but just the model with interactions
- For t-test, need to mention unequal variance
- Add why the group use t-test

Maggie

- Mentioned multicollinearity in an earlier section of the report but did not mention it later, which made the reader confused about whether the problem was addressed or not.
- More background information on variable
- Write a transition after the main objective to relate the objectives together

Yimin

- Test if there is any confounding variable
- Combine pie chart to one

Actions

- The group would reorganize the pie chart.
- Their main feedback is about the writing style of the report, we will make sure to provide enough background information.
- The group will make a table for displaying the equation of the model.
- We will justify why we use the t-test.
- We will rewrite the multicollinearity issue.
