

Oral Presentation Peer Review Notes

Based on the feedback, we will add the regression coefficient significance and p-value in the report and poster because there were questions regarding it.

We will also consider some writing styles changes according to the feedback, for example for the conclusion slide, instead of saying "Ametop + spray is likely more effective", we can add more statistical phrasing like "statistically significant".

We will also do more analysis for the linear regression, splitting the age groups differently to justify recommending the addition of vapocoolant spray for an age group.

We will consider splitting the graph and table on Slide 12 to enhance clarity.

The positive feedback was about our visualizations, thus we will keep most of it and improve any if necessary. Thus, when we present our findings to our client, he will understand it easier and improve clarity.
